Foreign Language and Literature (English) Major

3rd year student

**Annotation:** This manual presents the conveniences of information technologies in teaching foreign languages and the needs for them (in the case of English), the importance of technologies in language learning, the need for technology, a new approach to innovative methods in schools and higher education, and ideas on how to modernize the field of education and the use of these methods.

**Key words:** Verbal thinking, interference, transposition, linguaphone, Innovative approach.

Currently, education in general secondary education occupies a high place in the system of continuous education. The issues of teaching foreign languages in schools are being implemented using modern advanced technologies. The use of advanced pan-European technologies in teaching foreign language subjects to students, providing the educational process with modern textbooks and educational literature, implementing non-traditional teaching methods, and especially the widespread use of information technology tools in the educational process are among the most important issues.

Social networks and information technologies have become closely linked to the field of education. The session on improving the system of teaching foreign languages, chaired by the President of the Republic of Uzbekistan Shavkat Mirziyoyev Miromonovich, emphasized the need for foreign language teachers to have national and international certificates. Nowadays, conducting classes using not only a foreign language, but also modern technologies has become one of the priority tasks. The role of modern technologies in language learning and teaching is incomparable. The use of technological tools is useful in every aspect of learning a foreign language, namely listening comprehension, writing, reading and speaking. For example, for listening comprehension, of course, this process cannot be carried out without a computer, player, CDs. Listening comprehension is one of the most important parts of language learning. In the educational process, the student must be well-versed in modern technologies and know how to use them. In this process, including: -using computers, the student can watch and understand foreign language videos, -demonstrations, dialogues, movies or cartoons; -listening to radio broadcasts and watching television programs in foreign languages; -using tape recorders and cassettes, which are considered more traditional methods.

The approach to learning foreign languages with information technologies is quite effective. - Using computers to show videos, demonstrations, movies and cartoons, and useful games in foreign languages can further increase the effectiveness of the lesson. The resolution "On measures to further improve the system of learning foreign languages", adopted on December 10, 2010, is an important factor in ensuring the comprehensive provision of growing youth and teaching foreign languages, namely, providing them with computer equipment and language rooms. The rapid development of our era requires a new innovative approach to using its capabilities, and since the 21st century is the century of information technology, every student has

the opportunity to use such opportunities and learn it at an excellent level. However, to this day, there is a lack of such technical equipment in some remote villages of our country. In our study of information technologies, it is necessary to consciously connect it with knowledge and study of foreign languages, that is, verbal thinking, that is, thinking is closely related to words, and words are like concepts, thinking, etc.

Learning foreign languages has not existed since ancient times. Looking back at history, the demand for learning foreign languages (English, Russian, Spanish, French, German) began to increase after the years of independence. Currently, foreign languages are very important in our country, Western European languages (English, Spanish, German, French) and Eastern languages (Arabic, Turkish, Urdu, Persian, Chinese, Hindi) are taught in our republic. They are included in the curricula of educational institutions. The foreign language teacher, through his knowledge of information technologies and thorough mastery of the achievements of the methodology, achieves a clear understanding of the student's accumulated language experience and further improves it. In learning a foreign language, through special methods, students develop mental intelligence through innovative methods using various games and websites. The quality of the lesson and special approaches increase the student's interest in the lesson. Effective games: Squiz question is a game played in English on social networks and questions are answered in different ways.

"The game played through the site" is a game that develops memory, where the answer is given when you remember different words in English, and when you play it again, you remember it more. These games are played through social networks. Nowadays, when you say the word internet to everyone, its essence and how it works come to mind.

A CD player is available. The use of these technical means makes the process of learning a foreign language more interesting and effective for students. In the process of globalization, it is difficult to imagine our life without the Internet. It is one of the effective ways to use it in the process of mastering foreign languages and various knowledge. The possibilities of e-mail correspondence are also widely covered. Currently, as a result of the development of relations between our republic and a number of foreign countries, the field of translation is developing and becoming especially popular.

At the end of the 20th century and the first decade of the 21st century, mass computer programs and websites

- automatic, machine translation systems
- appeared and in everyday life they began to be called translator programs, and this name is often shortened to translator .

This article discusses aspects of the activities of human translators. In modern times, such a specialist usually needs to have a special higher education; this can be a higher education in translation or a broad philological field, and to carry out specialized, economic, legal, technical, medical, etc. translations, economists, lawyers, engineers, doctors, typists with higher education in the relevant field of their activity are involved, who have sufficient linguistic and translation skills, which can be obtained within the framework of their higher education and training courses for translators in the sphere of professional communication.<sup>1</sup>

Using various applications, you can learn many languages, including English, Arabic, Spanish, French, Italian, German, Irish, Dutch, Russian, Chinese and others.

The Duolingo application - the process of starting language learning through the application can be successfully carried out. Simply open the app, select the language you want to learn, and a personalized lesson will begin for you. You don't have to create an account, but if you do, you'll have access to many more features. For example, you can save and track your progress as you learn. Learners of all levels: beginner, intermediate, advanced, and more can use the app. The topics are tailored to different topics. There are exercises for reading, writing, listening, speaking, and pronunciation. You can use it at any time of the day and for any length of time. After each completed exercise, you'll receive a moving human-shaped Animations give the user a unique animation. For example, if you do the exercises well, the animated people will move, smile at you and give you a thumbs up. The languages you can learn are: Spanish, French, English, German, Chinese, Japanese, Korean, Italian, Portuguese, Dutch, Irish, Swedish, Turkish, Norwegian, Ukrainian, Russian, Polish, Hindi, Vietnamese, Hungarian, Greek, Indonesian, Czech. Duolingo can be used online or through applications for Android, iOS and Windows. Memrise is another free language learning app. Learning a language through this app is a bit more complicated than the Duolingo app. However, the app is easy to use and provides offline courses, so it can teach you many languages. You can start with the basic or advanced level. What makes Memrise unique is the way it teaches you new words and phrases. The program also has a translation learning method. The languages you can learn are: English, French, Spanish, Dutch, Portuguese, Norwegian, Japanese, Korean, Icelandic, Arabic, Turkish, German, Swedish, Polish, Italian, Chinese, Russian, Mongolian. You can use Memrise for Android and iOS, as well as online via a web browser.

Fluentu - this app allows you to watch video conversations with subtitles in the most common languages in the world. This app has its advantages for those who are strong audio-visual learners.

The advantages of this are: the range of topics is very wide. You can listen to various advertisements, music, videos, and conversations. While watching the video, subtitles appear for the words, and if you have any trouble understanding, you can easily find the meaning of the word by clicking on the word. The Busuu application is easy to use and is very convenient for language learners of different levels. The user simply registers and selects the language and level they want to learn. The application teaches the user words and phrases in sentences, and then tests them in a step-by-step test. Languages that can be learned are: German, Spanish, Portuguese, French, English, Italian, Russian, Polish, Turkish, Japanese, and Chinese. With Busuu, you can learn a language on Android, iOS, or the Internet. Rosetta Stone is a professional language learning service. This app mainly provides opportunities to learn words and phrases that are often used during travel. It also has a dictionary with basic words and phrases related to restaurants, hotels, and various types of travel, which is very useful for travelers.

If, the user wants, he has the opportunity to purchase dictionaries for color, currency and shopping. The list of languages that can be learned through this application includes; Spanish, English, French, Japanese, Italian, German, Chinese, Portuguese, Russian, Polish, Arabic, Persian, Korean, Dutch, Greek, Hindi, Irish and others. Many language learning applications teach the user

a language through exercises. Google Translate helps to write and read the entered text fluently and correctly in that language. The speaker starts reading the text in 2 different formats, fast or slow, using the audio button. In Google Translate, you can also translate words and sentences by typing, writing by hand and speaking. You can use the application even without an Internet connection. Just do not forget to download the language pack in advance. In addition, you can translate any text in Google Translate by taking a picture with the camera. At the same time, the program can only translate from a few languages. Google Translate can work in many languages, including Uzbek. The application can be used on Android and iOS systems.

In conclusion, it can be said that today it is difficult to do anything without technology, even in the field of education. The disciplines of computer science and digital technologies have also been linked to the methodology of teaching foreign languages and sciences. I think that now, thanks to information technologies, there will be no difficulties in the field of education, including remote access to documents, various books, magazines. After all, social networks and information technologies are one of the most beneficial ways to achieve the peak of knowledge.
